

Pre-P shot
and pre-
Botox
Flaccid
retracted

Pre-P shot
and pre-
Botox
Flaccid mid
hang

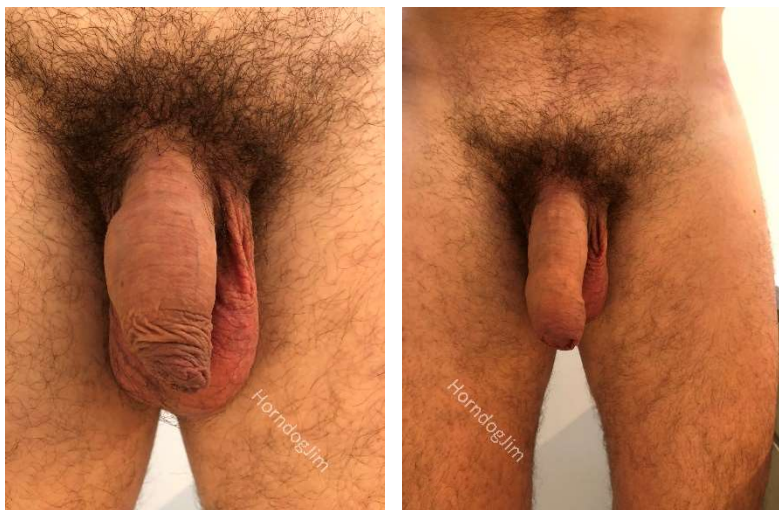

Pre-P shot and pre-Botox
Flaccid long hang

Pre-P shot and
Botox
erect

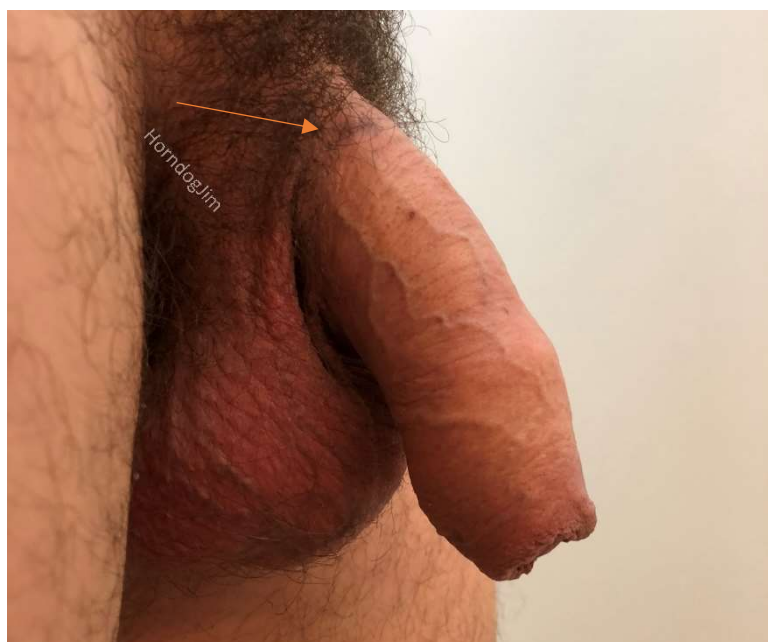

Immediately
post P-shot
and Botox

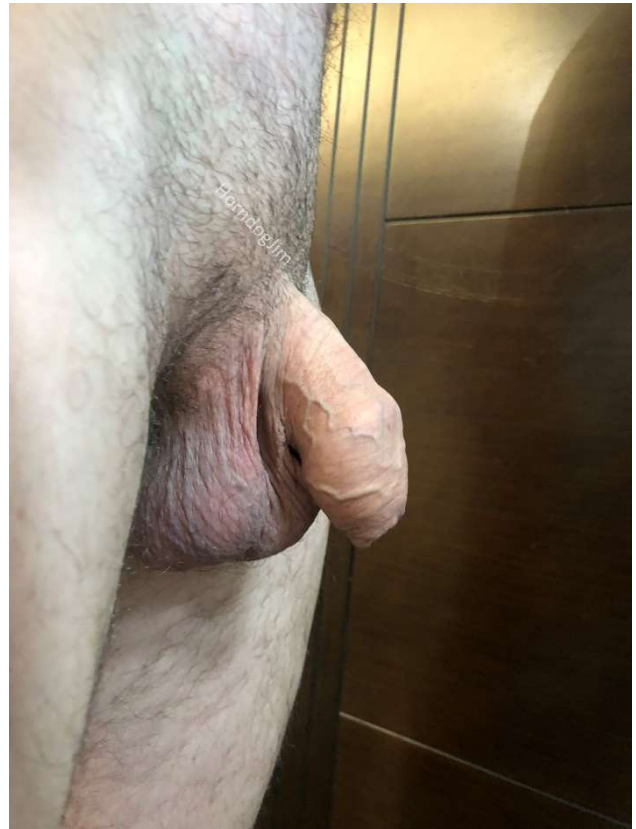

Pinpricks in
glans

Minor bruising
at top of shaft

One week
post P-shot
and Botox

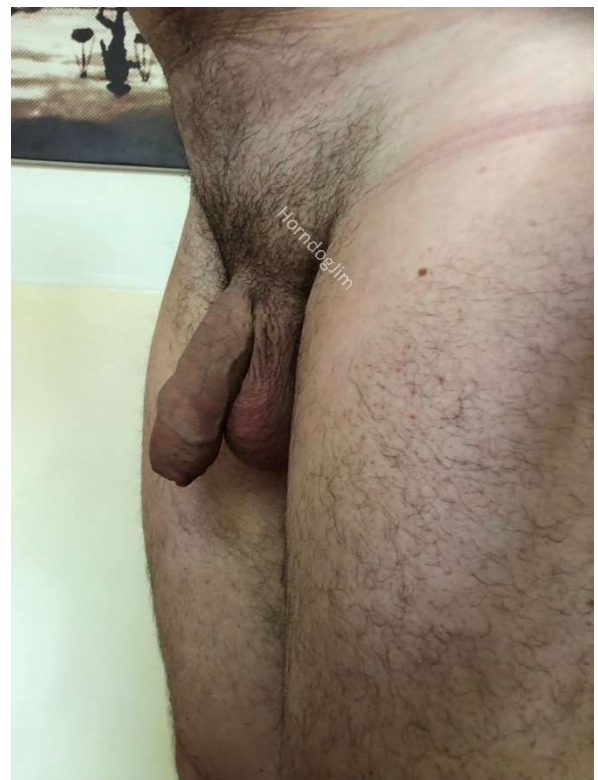

Two weeks
post P-shot
and botox

Doesn't
retract more
than this

Typical hang

More
prominent
veins, mid
shaft now
larger than
glans

One month post P-shot and Botox

- Slight reduction in mid shaft girth versus two week point
- Consistently longer hang
- Feels heavier and fuller
- Note limited size gains in erect state, maybe 1/8 of an inch. Slightly more vascular.

Before and after

More shaft thickness balancing head size (shaft now as wide as head)
Balls hanging much lower

Typical hang is lower
Veins bigger
Balls hang lower

Thick and full
hang, meaty feel
to shaft
Main vein more
prominent
Balls hanging
lower

Pre

Post

No noticeable change erect.
Usual EQ variances.
